

# Evaluating downloaded SVG files

Many SVG files available for download from sites such as Vecteezy.com aren't specifically intended for laser cutting or engraving. You will need to carefully evaluate their suitability, and possibly make some changes to make them suitable.

## Activity 18: Vector evaluation

**File:** *funky-frames.svg*<sup>79</sup>

Viewed on Vecteezy website

View in Inkscape, normal view

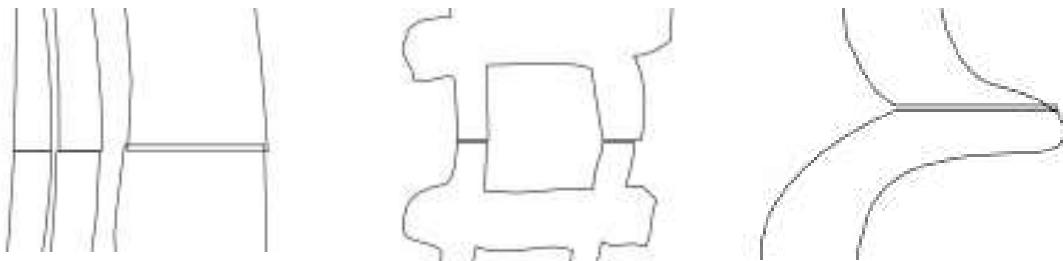

**Figure 58: Example vector images from Vecteezy**<sup>80</sup>

All the objects are suitable for laser engraving (once problem 1 is resolved).

Superficially, all the items appear to be suitable for laser cutting.

Closer inspection reveals the following problems:

### **1. Overlapping objects that are going to be cut as separate pieces (visible in the outline view).**
